

Yun Chang

PhD Candidate, Laboratory of Information and Decision Systems, MIT

Email: yunchang@mit.edu Phone: +1(808)388-0395 Website: yunzc.github.io

I am the CTO of a stealth robotics startup. Previously, I obtained a PhD at the SPARK (Sensing, Perception, Autonomy, and Robot Kinetics) Lab at the Laboratory of Information and Decision Systems, MIT. My experience includes robotics, computer vision, optimization, localization and mapping, multi-agent systems, and semantic scene understanding. My research interest is in improving the scalability and robustness of multi-agent perception systems, along with semantic 3D scene understanding and high-level representations for mapping to enable robots to carry out complex tasks autonomously. I have experience both in theoretical optimization and learning approaches for robotics and also in code development and field testing to deploy systems on mobile robots.

Education

- 2021 – **Massachusetts Institute of Technology, Cambridge, MA**
 - 2025 | *PhD in Autonomous Systems. Thesis: Large-Scale Multi-Robot Spatial Perception. Advisor: Luca Carlone. GPA: 5.0/5.0*
- 2019 – **Massachusetts Institute of Technology, Cambridge, MA**
 - June | *MS in Aerospace Engineering. Advisor: Luca Carlone. Thesis: Robust and Lightweight Localization and Dense Mapping for Multi-Robot Systems. GPA: 5.0/5.0*
 - 2021 | *Dense Mapping for Multi-Robot Systems. GPA: 5.0/5.0*
- 2015 – **Massachusetts Institute of Technology, Cambridge, MA**
 - 2019 | *BS in Aerospace Engineering. Advisor: Brian Williams. GPA 5.0/5.0*

Experience & Projects

- 2021 – **Kimera-Multi Library**
 - Ongoing | Co-author of the Kimera-Multi Library, a system for distributed multi-robot dense metric-semantic mapping. Contributed to all parts of the system and led field experiments to deploy the system on real-robots in various test sites. [github](#)
- 2021 – **Hydra Library**
 - Ongoing | Developed the Hydra library, a system to incrementally build 3D Dynamic Scene Graphs in real-time with camera input. My contribution was mainly focused on the components related to the optimization and update of the scene graph upon detection of a loop closure. [github](#)
- 2019 – **Kimera Library**
 - Ongoing | Part of the team that developed Kimera, a C++ library for real-time metric-semantic simultaneous localization and mapping. My focus is on the components related to the backend and loop closure detection, and also the creation and update of the 3D metric-semantic mesh. [github](#)
- 2019 – **DARPA Subterranean Challenge**
 - 2021 | Built and maintained a lidar-based multi-robot simultaneous localization and mapping (SLAM) system for team CoSTAR as part of the system supporting a team of heterogeneous robots competing in the DARPA Subterranean Challenge: a competition where a team of robots have to autonomously find and localize objects in a GPS denied underground environment. [website](#) [github](#)

- 2016 – **Undergraduate Researcher in the Model-based Embedded and Robotic Systems Group**
2019 Implemented risk-aware planning algorithms and assisted in the integration and deployment of the algorithms on quadcopters and turtlebots for experiments and data collection.
- 2018 – **Perception Intern at Aurora Flight Sciences**
2018 Designed an on-board system for an autonomous fixed wing aircraft to accurately track nearby air traffic by fusing received ADS-B air traffic control signals with visual aircraft detection from a pan-tilt camera.
- 2017 – **Research Intern in the Imperial College London Aerial Robotics Group**
2017 Developed and tested RGBD SLAM for aerial construction drones designed to demonstrate the possibility to 3D print buildings and disaster shelters using additive manufacturing techniques.
- 2015 – **Undergraduate Researcher in the Aerospace Controls Lab**
2017 Contributed to the Mobility on Demand project, which looked into ways to deploy shared autonomous vehicles to maximize service quality for customers. Helped with the maintenance of sensors on a fleet of golf carts for both localization and mapping and also to collect ride-data from the customers.

Leadership and Teaching Experience

- 2023 – **Teaching Assistant for Aeroverse (Aerospace Engineering in Extended Reality)**
2024 Worked with Professor Luca Carlone and Professor Olivier de Weck to design and teach MIT 16.S684, an experimental course that investigates whether AR / VR technologies improve the teaching of aerospace engineering concepts.
- 2020 – **Teaching Assistant for VNAV (Visual Navigation for Autonomous Vehicles)**
2020 Worked with Professor Luca Carlone to teach MIT 16.485, a course about the mathematical foundations of visual navigation (spanning from geometry to optimization), state-of-the-art algorithms, and software packages.

Awards & Honors

- 2025 **Outstanding Reviewer Award**
Robotics: Science and Systems 2025
- 2024 **Outstanding Systems Paper Award**
"Khronos: A Unified Approach for Spatio-Temporal Metric-Semantic SLAM in Dynamic Environments" [5]
- 2023 **The MIT Prize for Open Data**
Honorable Mention. Kimera-Multi Dataset [9]
- 2023 **IEEE Transactions on Robotics King-Sun Fu Memorial Best Paper Award**
"Kimera-Multi: Robust, Distributed, Dense Metric-Semantic SLAM for Multi-Robot Systems" [15]
- 2020 **DARPA Subterranean Challenge**
First place in the Urban circuit.
Second place in the Tunnel circuit.

- 2019 | **The Henry Webb Salisbury Award for Superior Academic Performance**
Awarded by the MIT Department of Aeronautics and Astronautics for superior and multiple-dimensional academic achievements in the undergraduate program.
- 2019 | **The Andrew G. Morsa Memorial Award**
Awarded by the MIT Department of Aeronautics and Astronautics for exemplary work at the boundary between computation, algorithms, and aerospace engineering and for supporting teammates with dedication and technical ingenuity.

Skills

Programming Language

C++, Python, Rust, MATLAB

Libraries

OpenCV, GTSAM, CVX, YALMIP, CGAL, Open3D, OpenGV, PyTorch, ROS

Languages

English, Mandarin Chinese

Field Robotics

Sensor hardware, System integration, Basic networking
